The IntelliGaze Communication System is an ideal communication solution for children and adults with communication and physical difficulties.

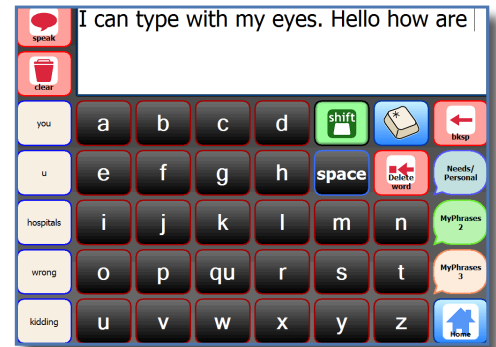

It is approved by Medicare, Medicaid and most private insurance programs.

IntelliGaze Communication System

Communicate with speed and confidence using one of the fastest eye gaze communication systems available!

The IntelliGaze Communication System from TTMT is an easy-to-use, powerful, hybrid head-eye tracking communication system designed specifically for individuals with limited physical control. It consists of two key components, the IntelliGaze eye-head tracker accessory and the popular EzComm speech-generating device. It is approved by Medicare, Medicaid and most private insurance programs.

The IntelliGaze Communication System is an ideal communication solution for children and adults with communication and physical difficulties ranging from ALS (Lou Gehrig's disease), Cerebral Palsy, Locked-in-Syndrome, Multiple Sclerosis, Muscular Dystrophy, Spinal Cord injury and many other similar conditions.

Simple.

Just look and click, it's that easy! Following a quick and easy setup, users calibrate and gain precise control using the quick 1 point calibration. The IntelliGaze Communication System enables users to simply look at the screen to communicate using a range of powerful communication options and an easy-to-learn, intuitive interface. Eye gaze selections are made using various methods such as dwell/pause, blink and switch.

Powerful.

Powerful communication! Communicate with ease using an extensive collection of communication options ranging from very simple, symbol-based vocabulary sets to more advanced keyboards incorporating word and phrase prediction as well as core word and phrase based pages. Much of the vocabulary content draws from and incorporates the research of Dr. David Beukelman, Dr. Diane Nelson-Bryen, Dr Elizabeth K. Hanson, and Barbara Collier.

Precise.

Precise control! Unlike many other eye gaze systems, the IntelliGaze Communication System has powerful, precise computer access and control capabilities. Users can interact directly with objects on the screen within the Windows environment and virtually all Windows applications without modifications required on other systems. Small targets can be accessed using the Blickfang™ (magnetic cursor) feature.

Flexible.

The IntelliGaze Communication System is extremely flexible, and allows and compensates for large head movements and has exceptional accuracy over a large tracking range. The modular, lightweight and portable design enables adaptability and flexibility across communication environments, and can easily be mounted to a wheelchair, desk or over a bed.
